

# Release 2017.06 (LTS)

You can find an overview of all innovations on the documentation site "Was ist neu?". A detailed list of changes is provided in the Changelog. This is a long term support release (LTS), so we support this version for one year.

If you have your application already near version 2017.06, you only have to update your pom.xml (docportal/config): [...] `<groupId>org.mycore</groupId>  
<artifactId>application-model</artifactId> <version>2017.06.0.1-SNAPSHOT</version>  
[...] <dependency> <groupId>org.mycore</groupId> <artifactId>mycore-complete</  
artifactId> <version>[2017.06.0.1-SNAPSHOT,2017.06.1]</version> <optional>>false</  
optional> </dependency> [...]` In the next step you have to build your application again (ant resolve create.jar create.scripts create.webapp).

This page is currently under construction. See you again soon!
