

# Release 2017.06 (LTS)

If your application is already near version 2017.06, you only have to update your pom.xml: [...] `<groupId>org.mycore</groupId> <artifactId>application-model</artifactId> <version>2017.06</version> [...] <dependency> <groupId>org.mycore</groupId> <artifactId>mycore-{component}</artifactId> <version>2017.06</version> <optional>false</optional> </dependency> [...]` In the next step you have to build your application again `mvn clean install`.

See Changelog for development information.
